Salesman

id	Name	City	Commission
5001	James Hoog	New York	0.15
5002	Nail Knite	Paris	0.13
5003	Lauson Hen	Germany	0.12
5005	Pit Alex	London	0.11
5006	Mc Lyon	Paris	0.14
5007	Paul Adam	Rome	0.13

Evaluation: 1

1. Insert all documents to Books and Purchase collections
2. create a text search for Title
3. select Title, sum(price) from Books order by Title ASC
4. select Book_id,item_quantity from Purchase Group by Book_id Having count(item_quantity)>1
5. Query to execute the sum of the price group by Edition

6. select Title as _id, sum(quantity*price) as totalAmount from Books order by totalAmount in ASC
7. Query to print only the average of puchase_amt
8. select Title as _id, sum(quantity*price) as totalAmount from Books where totalAmount>=1000.00 order by totalAmount in desc
9. update the Book name COBOL as COBOL_new_Edition using Variable in let
10. Query to set unique document in Books Collection
11. Autoincrement in MongoDB to store sequence of Unique id for Books collection
12. select documents where purchase_amt%4=0

Evaluation: 2

1. Query to join the two collections of Customer and Salesman
2. select FirstName, LastName, Ciry, State from Customer where State='WA' order by City
3. update the commission of Salesman id=5005 to 0.13 and display the output immediately after the updation.
4. Select the documents where the name starts with 'G'
5. Create a text search for Name in salesman and search the name = 'Pit Alex' and display the output
6. Select the documents from Customer starting with 'k' using regex option keyword
7. Fetching the last nth document from Customer
8. pipeline opertor to join the two collections based on purchase.salesman_id=salesman.id
9. Joining the two collections into one document output - select customer.FirstName, customer.LastName, customer.Phone, Customer.Email, Purchase.item_quantity, Purchase.purchase_amt from Customer left join on Purchase where Customer.id=Purchase.customer_id order by Customer.FirstName
10. db.students3.insertMany([

{ "_id" : 1, "tests" : [95, 92, 90], "average" : 92, "grade" : "A", "lastUpdate" : ISODate("2020-01-23T05:18:40.013Z") },

{ "_id" : 2, "tests" : [70, 75, 82], "lastUpdate" : ISODate("2019-01-01T00:00:00Z") }])

Find the Average and grade of _id:2 and update the ISODate to current date and time.
